| ___ 2. intensify | (b) separate |
| ___ 3. irrigation | (c) lose |
| ___ 4. aggregate | (d) drainage |
| ___ 5. adversely | (e) positively |

2. Reading (*The MP3 is available online*)

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

In countries like Niger and Mauritania, the **cultivation** of land has changed little in the past several centuries. Additionally, these countries' mono-modal rainfall pattern brings **precipitation** for only three months during the year. **As a result**, food production doesn't nearly meet demand.

Several agencies and organizations have **intensified** their efforts to increase the productivity of land in these countries. They have introduced new strains of seed, improved **irrigation** techniques, and introduced new methods of **fertilization** and soil management. With ample sunlight for **photosynthesis** and modern irrigation techniques, sustainable farming techniques should allow farmers to boost **aggregate** production in order to meet demand.

Still, crop revitalization faces an unexpected **adversary**: institutional incompetence. Where crop specialists have convinced individual farmers to **abandon** old farming techniques in place of new, they can't readily **obtain** the governmental cooperation they need. The biggest hurdles are political corruption, incompetence, and the absence of a marketing infrastructure.

Bonus Structure - As a result means "therefore," "for this reason."

1. In this passage, the word **adversary** is closest in meaning to

- a. friend
- b. helper
- c. enemy
- d. leader

2. In the last paragraph, the word they refers to

- a. crop specialists
- b. farmers

- c. farming techniques
- d. adversaries

2. Reading *(The MP3 is available online)*

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

Time is, **as we all know**, money. Such valuation of time leads people to extreme efforts to *maximize* their use of time. Some people obsess over knowing the exact time. They buy clocks and watches that automatically *adjust* themselves over the Internet or by radio waves. These measurements allow them *infinitesimal* accuracy in dealing with time. Regardless of how one tracks time, most people share a common goal: They want to use time effectively. Since about 1982, this efficiency has increased *exponentially* each year, thanks to computers and their ability to multitask. In multitasking, a computer executes several different tasks in *parallel*. Rather than being set *arbitrarily*, each task is given a priority in the computer's operating system, and time is spent in *proportion* to the priority of the task. The computer executes different *sequences* of tasks at different clock cycles, thereby increasing the *rate* of output from a process.

Bonus Structure
As we all know

2. Reading (The MP3 is available online)

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

Like other functions of the human mind, perception and memory are imperfect. When we tell a story about something that we witnessed, we may *intuitively* believe that our recollection is accurate. However, several factors bias our memories of events. To study this *anomaly*, let us look at the three steps of memory creation: *acquisition* of memory, storing of memory, and *retrieval*. At every stage of memory formation, distortion can occur. At the first stage, acquisition of memory, events are perceived and bits of information are prepared for storage in the brain. However, it is impossible for us to remember every single thing we observe. Through processes that are both *conscious* and unconscious, people determine which details they will focus on.

In its second stage, storage, memories can become further distorted. Over time, our memories *degrade*, as we forget portions of events. To compensate, we may even creatively fill in the *gap* created by the *recession* of long-term memory. Additionally, an individual's memory can be altered during the storage stage by *intervening* occurrences, which can be subconsciously combined with previously stored memories. Last but not least, we search our memory to locate information. During recall, emotion also seems to play a part in memory distortion. **In sum**, our memories may not be the *indisputable* source of information that we would like them to be.

1. An introductory sentence for a brief summary of the passage is provided below. Complete the summary by selecting the three answer choices that express the most important ideas in the passage. In each blank, write the letter of one of your choices.

Bonus Structure
In sum means “to summarize; to give a short version of what has been stated.”

Memory provides an imperfect record of events.

2. Reading (*The MP3 is available online*)

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

The aborigines of Australia may have been some of the first people on the planet. Recent discoveries of *relics*, including stone tools, show that humans lived near Penrith, New South Wales, about 47,000 years ago. Australian aborigines migrated from northern lands by sea, when the water passages were narrower than they are today. This is the first evidence of sea travel by prehistoric humans. The *saga* of this water passing survives in modern-day aboriginal *folklore*. **To put this in perspective**, remember that 50,000 years ago, humans were nomadic. Early aborigines did not cultivate crops, and in Australia at the time there were no animals that could be *domesticated*. No one knows how long it took aboriginal people to reach Australia, but archaeologists are searching through ancient campsites for *vestiges* of their early lifestyle. *Fossilized* remains indicate that these nomadic people not only gathered food from the land, but they also subsisted on meat from large animals that no longer exist today. As part of their hunting tradition, aborigines *ritually* covered themselves in mud to mask their own scent or for camouflage. Aboriginal society marked the major events of life with *rites* such as circumcision, marriage, and *cremation*. Older people were revered and cared for as great sources of wisdom. When Westerners arrived in Australia in 1788, the 300,000 aborigines who lived there were not eager to *assimilate* their ways. In the following years, disease, loss of land, and loss of identity shaped the aborigines' history perhaps as much as their first prehistoric crossing from the north.

<p><i>Bonus Structure</i></p> <p>To put this in perspective means “to give some background information.”</p>

1. Which sentence best expresses the essential information in this passage?

2. Reading (*The MP3 is available online*)

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

The great unsettled question of economics is: "How much should the government *regulate* business?" Conservatives generally argue for a *decline* in government involvement, but they favor certain *subsidies* to farmers, steelmakers, or airplane manufacturers. Some conservatives also see no conflict between their small-government views and their eagerness for the government to *allocate* more money for roads into national forests. The *net* result of these incursions into national forests is a *tangible* infrastructure that helps some companies but not the public. Publicly owned trees, land, and oil become *commodities* from which a few private companies (many owned by small-government conservatives) profit. No *per capita* benefit goes to the American people, **aside perhaps from** the brief *anti-inflation* effect that comes with new oil exploration.

1. What is the main idea of this reading?
 - a. Conservatives have tried to keep others from expanding government regulations.
 - b. Even though conservatives say they want to limit government involvement in business, they actually do often favor it.
 - c. There are several views about the proper role for government in business.
 - d. Small-government conservatives want the government to allocate a certain amount of federal money per capita to help all Americans.

2. Which of the following does the author claim?
 - a. Industries will become subsidies.
 - b. Oil exploration causes inflation.
 - c. Some elements of nature will become commodities.
 - d. Infrastructure will be made of trees, oil, and land.

2. Reading (*The MP3 is available online*)

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

In the history of U.S. presidential *elections*, the year 1876 stands out as one of the oddest. That year, *polls* suggested that one person had won the popular vote but another had won more official electoral votes - just as happened in the year 2000. In 1876, however, the election was so *bitterly contested* that a special electoral commission was given the *authority* to determine which *candidate* - Republican Rutherford B. Hayes or Democrat Samuel J. Tilden had won. This commission represented a *coalition* of interests. The Democrats favored this because otherwise the head of the Senate, Republican Thomas Ferry, would probably have been allowed to declare the winner. In the end, the Democrats were disappointed, as the commission *advocated* the Republican cause. The situation was not settled until March 2 of 1877, only three days before the scheduled *inauguration* of a new president - Hayes, **as it turned out**.

Only then did America find out who its new leader would be. Americans seem not to have learned many lessons from 1876, however, because in 2000 there was still no official *policy* on how to settle an election that hung on a few contested votes. The problem was settled (by the Supreme Court) much faster in 2000, but still, no real system had been set up to deal with the situation.

4. Medical bills in his last year greatly reduced the _____ going to Tom's wife.
5. Legally, parents have the same _____ of relationship to an adopted child as to their biological children.

2. Reading *(The MP3 is available online)*

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

The nature of the family varies widely from culture to culture. In some societies, family members tend to stay in close *proximity* to their *kin*, never moving more than a few miles away from the *ancestral* home. In other places, while the members of one generation may all live near one another, their *descendants* in the next generation scatter widely. In such a case, it's difficult to maintain the same family *cohesion* enjoyed by those who live close together. Sometimes marriage can govern family structure; for example, there may be strict traditions requiring a new bride to leave her *paternal* home and *siblings* to move in with her new husband's family. Such traditions are followed, even by young couples who don't like them, because going against them is likely to result in the loss of *inheritance*. Whatever one's own *sentiments* about family structure, it is important to recognize that one culture's family system is as *legitimate* as another's.

1. Which of the following best states the main idea of this passage?
 - a. Different family systems can be found worldwide, but each one deserves respect.
 - b. Societies in which children move far away from their parents are not very cohesive.
 - c. Although some societies still require a wife to move in with her husband's family, this tradition is dying out.
 - d. The most important factor in family happiness is close proximity to your relatives.

2. According to this reading, which family system is most common?

- a. Members of a family living in the same community.
- b. Family members spreading out and living in various cities.
- c. Young couples living with the man's parents.
- d. It is impossible to tell from this reading.

2. Reading *(The MP3 is available online)*

Read the passage to review the vocabulary you have learned. Answer the questions that follow.

Many *adolescents* and young adults go through a period when they *rebel* against what they perceive as an insincere world. Teens may take up *causes* such as radical environmentalism, protesting against the *status quo*. They may choose clothes that annoy their parents and associate with people from the *fringes* of society. This is a delicate period in a person's life, full of chances to make bad decisions that could lead to juvenile *delinquency* and even jail. **Conversely**, it can be a time of personal discovery that strengthens teens in a moral rejection of *hedonistic* lifestyles. At this age they may fearlessly speak up against *hypocritically* self-righteous authorities and against *manipulation* by the news media. These adolescent protests can lead to *conflicts* within families and communities, but stirring things up can also lead to serious reflection and positive change.

1. Which sentence best expresses the essential information of this passage?

- a. Teens are hedonistic and self-serving.

A good response framework to a question might include the following:

Question:	Do you agree or disagree with the following statement ? Farming techniques in Third World countries are inadequate.
Topic Sentence	I think that farming techniques in Third World countries are inadequate.
Reason	My reason for saying this would be that modern technology in First World countries has driven agriculture forward in terms of GDP and individual earnings for private farmers, more than that of Third World countries.
Example	For example , last year I remember reading in The Korean Herald that farmers in Ethiopia had suffered drastically during their harvesting season due to a long drought. The article stated that this was down to old and ill designed irrigation systems, showing that output for that time of year was much lower than forecasted.
Conclusion	In conclusion I do believe that farming techniques in Third World countries are inadequate and need addressing if the agricultural industry in these regions is going to survive and compete in the modern world.
Rejoinder	Really?
Follow-Up Question	Don't you think that modern techniques destroy the land and communities of small private farms?
Response	No. I disagree with you there, because....
